

Applying / Removing Juzo Adhesive

To apply Juzo adhesive lotion, place in stripes/spots down the limb – you should only require 3-4 stripes, but ensure they go down and not around the limb. If your garment has a silicon topband, it is OK, but not necessary, to put the adhesive lotion where the topband will rest on your limb.

When ready to remove your garment, ensure you wet/moisten the areas where the glue has been applied. This will dissolve the glue and make removal easy. If you don't, you risk exfoliating the skin, which could cause redness or a rash.
