# ABOUT THYSOL® GROUP

THYSOL is the market leader throughout Europe, supplying its products to both the medical industry and patients alike. THYSOL GROUP is among the very few companies that has control over the production facilities. This ensures THYSOL has complete control during the manufacturing process guaranteeing high quality production. This also allows THYSOL to be extremely innovative in supplying a variety of new products.

These standards and the brands below are the foundation of the company;

**CureTape®**, a portfolio of medical level (human) kinesiology tapes.

**VetkinTape®**, a product line of veterinary kinesiology tape.

**FASCIQ®**, a range of fascia massage tools

Having conducted over 15,000+ courses worldwide to date, THYSOL continues to train medical professionals on how to use their products through the MTC® brand.

**MTC®** or Medical Training Concept is a series of courses that specialize in teaching health care professionals how to best use THYSOL's extensive range of health aids to the benefit of the patient via a series of detailed educational courses and workshops.

## Our Vision

At THYSOL, our aim is to enable both therapist and patient alike to gain easy access to affordable innovative treatment methods and high-quality products to prevent "immobility" and promote optimum health.

## Our Mission

As a leading tape company, we provide the facilities, products and trained personnel to deliver state-of-the-art medical devices and services that enable people and animals to live life to the fullest.

Our philosophy is that our products in combination with the right application should help, support and speed-up the recovery of the body.

# About VetkinTape®

THYSOL teamed up with veterinary professionals to develop VetkinTape®, a kinesiology tape for animals. The development of VetkinTape® was made possible because THYSOL has its own production facility. THYSOL has knowledge and expertise of both human and veterinary applications, all of which are provided by their own research and development facilities in Seoul, Korea.

A special tape for veterinary application was needed due to many different factors such as skin, muscles structure and anatomy. All these were considered when developing this innovative veterinary kinesiology tape. The result, VetkinTape®, is a tape with an excellent adhesive acrylic layer and offers maximum results for the veterinary market.

## Mission

The mission of VetkinTape® is to develop and offer veterinary kinesiology tape, as well as educate animal physiotherapists and veterinary professionals in the different application areas and taping techniques. Our primary goal is to improve the condition of the animal's body. To achieve this, VetkinTape® provides a range of medical tapes, tools and medical equipment to support, improve and stimulate the movement of all parts of the animals body. VetkinTape® is constantly searching for innovative new methods and ways to treat animals 'immovability', without the use of chemical substances (e.g. pharmaceuticals, medicine). By screening veterinary success stories, VetkinTape® wants to ensure animals (animal physios and veterinary professionals) to have access to secure and effective treatments. VetkinTape® has a philosophy that the products -combined with the right method and concept- should help, support and speed-up the body's recovery.

## Vision

The vision of VetkinTape® is stated as followed:

"In a few years VetkinTape® will be the global standard for kinesiology taping and used by a substantial group of animal physiotherapists and veterinary professionals to treat and prevent animal injuries."

# About CrossLinq®

CrossLinq® are non-elastic, grid-shaped tapes that are produced in our own factory in South Korea. CrossLinq has a skin-friendly acrylic adhesive layer. These tapes are mainly used on (local) pain points, trigger points and acupuncture points.

When applying to pain points you can easily apply the CrossLinq® yourself, however, application to trigger points and acupuncture points requires specific knowledge. The CrossLinq® can be used in conjunction with Vetkin® Tape or on it's own as treatment.

# CrossLinq® Patches

**Materials:** Non-elastic, self-adhesive, waterproof, grid-shaped patches with a skin-friendly acrylic adhesive layer.

**Dimensions:**  
 Small: 1.4 x 1.8cm: 20 sheets x 12 crosslinqs  
 Medium: 2.1 x 2.7cm: 20 sheets x 8 crosslinqs  
 Large: 4.4 x 5.2cm: 20 sheets x 2 crosslinqs

**Displaybox:** 10 single packs

**Available Sizes:** Small/Medium/Large

**CrossLinq Single Pack Small**  
(240 patches)  
8717624163012

**CrossLinq Single Pack Medium**  
(160 patches)  
8717624160998

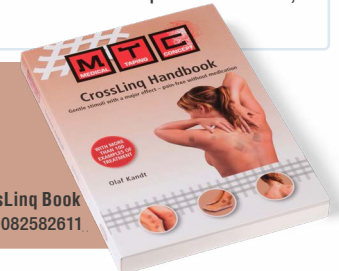

**CrossLinq Single Pack Large**  
(40 patches)  
8717624163036

# CrossLinq® Book

The CrossLinq handbook contains more than 100 practical examples of treatment, 364 pages with clear explanations of the method, and high-quality photos of all treatments. The handbook also contains the latest insights and provides a total overview of the applications that are possible with CrossLinq, conveniently in alphabetical order of the conditions. CrossLinq is used on (local) pain points, trigger points, and acupuncture points. CrossLinq tapes are grid-shaped, electrostatically charged tapes that remove blockages, reduce or even remove pain and ailments, painlessly and without medication.

# About FASCIQ®

FASCIQ® is a brand with high quality and easy to use fascia massage tools such as trigger point tools, IASTM tools and cupping sets. Recommended by leading R&D institutes.

FASCIQ® products are used to treat the fascia, to bring about a loosening of the fascia (fascia release) and to maintain a flexible fascial network (fascia treatment). Regular use of these products can prevent injuries.

Fascia mainly consist of connective tissue in different forms and structures. They are located throughout the body and are interconnected. In recent years, we have learned more and more about the function of the fascial network. Good results have been achieved with a treatment directed specifically at the fascia.

Among other things, the fascial network has an effect on:

- Strength
- Movement and mobility
- The immune system
- The balance of various internal systems (lymphatic, digestive, hormonal and metabolism)
- The posture

Various products are used to treat the fascia, to bring about a loosening of the fascia (fascia release) and to maintain a flexible fascial network (fascia treatment). Regular use of these products can prevent injuries.

## Endorsed by Dr. Robert Schleip

Fascia massage tools are an excellent method of releasing constrictions of the muscle. All FASCIQ® products are recommended by Dr Robert Schleip, director of the Fascia Research Group.

# FASCIQ® IASTM Tools

The FASCIQ® IASTM Tools (“Instrument-Assisted Soft Tissue Mobilization Tools” or in short “Instrument Assisted Massage Tools”) consist of a number of separate tools with multiple shapes and edges to increase their employability. In addition, FASCIQ® also offers two complete IASTM toolsets with various shaped tools. All IASTM Tools are packed in a sturdy, beautiful storage bag.

The smaller tools are generally used for the treatment of smaller parts of the body, smaller strokes and reaching superficial tissue structures. The larger and heavier tools are used to reach deeper and are suitable for the treatment of larger parts of the body. These IASTM tools help prevent joint wear and strains complaints among therapists.
