Little Supporter

Aid for bandaging arms and legs

Problem definition

According to practical guidelines for caregivers, static load is a major source of physical strain in health care. Wound care and bandaging arms and legs are leading causes of this problem.

Solution

The Little Supporter takes the concept of the director's chair one step further ensuring direct reduction of physical strain. For example, the support offered by the Little Supporter enables quick and easy wound care, as well as trouble-free bandaging of arms and legs. The frame is made from extremely lightweight glass-fibre and plastic materials which means that it is very strong, durable and, what's more, it can be sterilized. Disposable slings provide added hygiene.

Target group

All caregivers faced with the daily task of wound care or bandaging an arm or a leg.

Little Supporter

Great aids don't need to be big

Product benefits

- Trouble-free bandaging of legs and arms
- Easy to use
- Saves time and money
- Durable
- Can be sterilized
