Sim-Slide - The New Standard

The ultimate donning and removal aid for open toe compression stockings and tights in one product.

Sim-Slide

Problem definition

For both caregivers and patients, the problem of donning compression stockings and tights, is one, which occurs on a daily basis. For caregivers, donning and removing compression stockings is a major source of physical strain. In addition, patients who are able to carry out the operation independently may find the process an increasingly arduous one. This often has a direct effect on therapy compliance.

Solution

Sim-Slide has been specifically designed to alleviate the problems experienced when donning and removing compression stockings and tights with an open toe. Sim-Slide is made of very smooth material, which has been treated with a special coating. Together with the dual-layer application, this coated material creates a super-smooth aid that reduces friction significantly.

The friction reduction of Sim-Slide helps to minimize the physical strain otherwise experienced by caregivers and patients. In turn, this has a positive effect on the therapy compliance of patients. Also, with clear and simple instructions-for-use, patients can enjoy the freedom and convenience of independently donning and removing open toe compression hosiery for a long time.

Users

Sim-Slide provides an effective solution for patients who wear compression stockings and tights with open toe. Thanks to Sim-Slide, hosiery can now be donned and removed without difficulty. Furthermore, Sim-Slide is an essential aid for caregivers who are faced with the prospect of donning and removing their patients' compression hosiery on a daily basis.

Sim-Slide®

One solution for two problems!

Product benefits

- Two in one
- Reduction of physical strain for both caregiver and user
- Increase in patient's independence and therapy compliance
- Stockings retain therapeutic graduated compression longer
- Easy to use
- Saves time and money
