Choosing Between Anti-Embolism & Compression Stockings

The Difference Between Anti-embolism and Graduated Compression.

Anti-Embolism Stockings:

also known as T.E.D.S., these stockings were designed specifically for non-ambulatory patients or those confined to a bed or wheelchair. They are a low-cost, temporary solution commonly used for patients in nursing homes and post-surgical in the hospital to prevent coagulation (thrombosis) and to stimulate blood flow.

While therapeutic, offering 8-18 mmHg (millimeters of mercury), anti-embolism stockings are not aesthetically appealing, are difficult to put on, and can be itchy or irritating against the skin. For the ambulatory patient, these stockings provide minimal length elasticity which can lead to bunching or binding that can constrict blood flow.

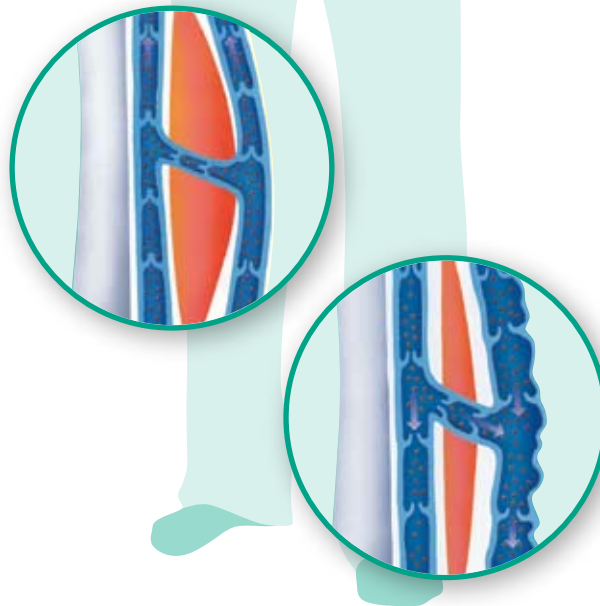

Graduated Compression Stockings:

are medically therapeutic and designed for people who are mobile. They offer graduated compression, providing 100% pressure at the ankle and decreasing proximally towards the thigh. Compression levels range from 12-20 mmHg to 50+ mmHg. Greater compression is often necessary due to the increased effects of gravity on the circulatory system in an upright, ambulatory patient. Individuals needing compression stockings often wear these on a daily basis. Compression stockings are designed to be aesthetically appealing, easy to put on and most importantly, comfortable to wear.

Why Compression Therapy?

Graduated Compression Therapy Provides the Necessary Support

Compression stockings and socks provide external support to the vein walls and work in conjunction with the calf muscle pump. *Compression stockings improve circulation while helping to minimize and control leg and ankle swelling.*

Juzo® Compression Garments

Options & Comfort:

Juzo® compression stockings are available in a variety of colors and styles. Increased elasticity enables the stockings to move with the ambulatory patient, minimizing bunching and binding around the ankles and knees.

Easy to Care For:

Juzo® compression garments are easy to care for. They can be machine washed, tumble dried, and are resistant to sun, ointments, lotions and perspiration.

Latex Free:

All Juzo® garments are latex free and produced using the highest quality, most durable, Lycra® fibers.

Widest Selection of Standard Sizes:

Juzo® offers the widest range of standard sizes and lengths. This assures the maximum number of patients a precise fit and optimal therapeutic effectiveness.
